

Project Initialization and Planning Phase

Project Name: Implement Client Script & UI Policy (Incident)

Team ID: SWTID-2026-8065

Maximum Marks: 3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement from the customer's point of view using the project problem described in the source document.

Problem Statement (PS)	Source-based response
I am (Customer)	A ServiceNow Incident user who needs to create and submit Incident records with consistent and accurate data.
I'm trying to	Enter complete and valid Incident information so that Incidents can be effectively triaged, routed, resolved, and submitted according to defined business rules.
But	Relying on user awareness and manual checks can result in incomplete, inconsistent, or incorrect data being submitted.
Because	Conditional field behavior and validation are not enforced directly at the user interface level without standardized UI Policies and Client Scripts.
Which makes me feel	Concerned about reporting accuracy, SLA compliance, overall service quality, and the consistency of Incident data.

Source project context: The project uses Incident Management UI Policies, UI Policy Actions, Client Scripts, and Form Validation to control field behavior, make fields mandatory, auto-populate values, and prevent invalid record submission.
