

Data Flow Diagram

Date	29 September 2026	Team ID	SWTID-2026-8065	Project Name	Implement Client Script & UI Policy (Incident)	Maximum Marks	2 Marks
------	-------------------	---------	-----------------	--------------	--	---------------	---------

DFD for the Incident configuration project: data enters through the Incident form, is processed by UI Policies and Client Scripts, and is stored as Incident records when validation succeeds.

Validation / Control Flow: If Impact = High and Assigned To is empty, the onSubmit Client Script blocks saving and shows an error. If Impact changes from High to another value, Reverse if false restores the appropriate field behavior. onCellEdit blocks direct State changes from the Incident list.

DFD Symbol Legend		
Symbol	Name	Description
Rectangle	External Entity	Incident user who enters or updates Incident information.
Numbered rectangle	Process	Activity that transforms or validates Incident data.
Solid rectangle	Data Store	Incident records where validated data is stored.
Labeled arrow	Data Flow	Movement of Incident data between the user, processes and data store.
