

Solution Requirements

Date: 15 March 2026

Team ID: SWTID-2026-8065

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 4 Marks

Define Functional and Non-Functional Requirements

The requirements below are derived only from the project document. Where the project document does not specify a requirement or metric, it is marked as not specified.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High /Medium/Low)
1	Authentication	Not specified in the project document.	—
2	Authorization levels	Not specified in the project document.	—
3	External interfaces	Not specified in the project document. The solution is configured on the ServiceNow Incident table.	—
4	Transactions processing	Incident form submissions must be controlled so that High Impact incidents cannot be saved when Assigned To is empty. Client-side validation returns false when the condition is not met.	High
5	Reporting	The project document states that consistent and accurate Incident data supports reporting accuracy. No separate reporting feature is specified.	—
6	Business rules, etc.	When Impact is High, Assignment group is mandatory, Urgency is read-only, Urgency is automatically set to High, Assigned To is required before submission, and State cannot be changed through list editing. When Impact is changed away from High, the mandatory/read-only conditions are reversed.	High
7	Compliance to laws or regulations	Not specified in the project document.	—
8	Other	The solution must support testing of mandatory enforcement, successful save, reverse condition, list-edit blocking, and form-based State update.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The project is intended as a lightweight and efficient micro project using client-side UI Policies and Client Scripts.	Lightweight and efficient; no numeric response-time target specified.
2	Scalability	Not specified in the project document.	—
3	Security & Data Privacy	Not specified in the project document.	—
4	Reliability & Availability	The configured controls should consistently enforce the specified Incident field behavior during testing.	Required behaviors pass the documented test cases; no uptime target specified.
5	Usability & Accessibility	The solution dynamically controls fields and provides an information/error message to guide users when required conditions are not met.	Required messages and field behavior are displayed as documented; no accessibility standard specified.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
6	Other	The configuration should maintain Incident data quality and consistency by reducing incomplete, inconsistent, or incorrect submissions.	Data integrity controls operate according to the documented UI Policies and Client Scripts.
