

Solution Architecture

Date: 15 March 2026

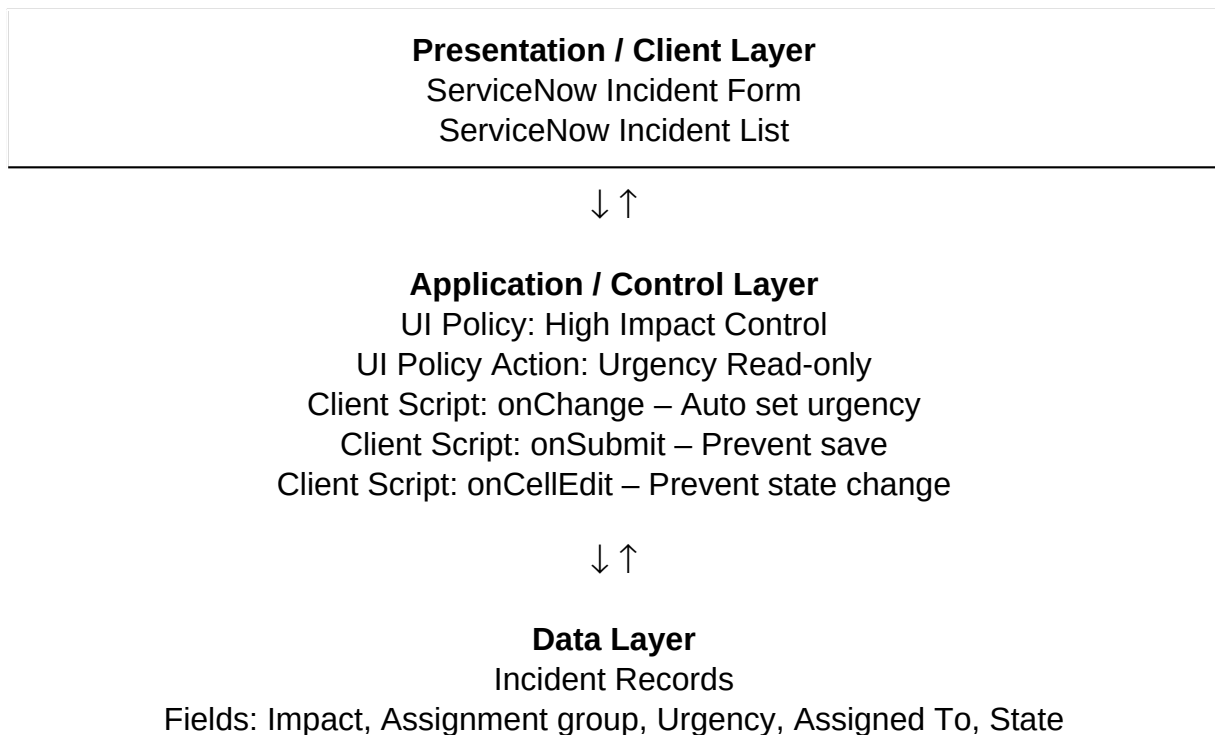

Team ID: SWTID-2026-8065

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 5 Marks

Solution Architecture Diagram:

The architecture below maps the ServiceNow Incident form and list as the client/presentation layer, UI Policies and Client Scripts as the application/control layer, and Incident records as the data layer.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides the Incident form and list interface where users enter and update Incident data.	ServiceNow Incident Form / List
Application / Control Layer	Applies dynamic field behavior, mandatory enforcement, automatic urgency setting, save validation, and list-edit restrictions.	ServiceNow UI Policies, UI Policy Actions, Client Scripts
Database / Data Layer	Stores Incident records and the fields controlled by the configuration, including Impact, Assignment group, Urgency, Assigned To, and State.	ServiceNow Incident Records

Architecture Flow: User → ServiceNow Incident Form/List → UI Policies & Client Scripts → Incident Records
