

Code-Layout, Readability and Reusability

Date: 29 September 2026

Team ID: SWTID-2026-8065

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. The project uses ServiceNow UI Policies and Client Scripts to enforce data integrity on Incident records through dynamic field behavior, automated updates, validation, and controlled list editing.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing and indentation used throughout the Client Scripts.	Yes	Scripts are formatted clearly for easier reading.
2	Proper File Structure	UI Policies and Client Scripts are logically organized in ServiceNow.	Yes	UI Policy and Client Script configurations are separated.
3	Meaningful Variable Names	Variables and field names reflect their purpose clearly.	Yes	Examples include impact, urgency, assigned_to and state.
4	Function / Method Names	Functions are descriptively named according to their trigger.	Yes	onChange, onSubmit and onCellEdit are used appropriately.
5	Code Comments	Comments or clear naming explain the purpose of the code.	Yes	Script names and messages clearly describe the intended behavior.
6	Modular Design	Code is split into reusable functions/modules.	Yes	Separate Client Scripts handle urgency, save validation and state change.
7	No Redundant Code	Duplicate or unused code is avoided.	Yes	Each script has a distinct validation or control purpose.
8	Error Handling	Errors and invalid actions are handled gracefully.	Yes	Save is blocked with an error message when Assignment is not found.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	High Impact Control UI Policy	ServiceNow UI Policy	Incident form	High
2	Auto set urgency for high impact	JavaScript / Client Script	Incident form on Impact change	High
3	Prevent save if Assigned To missing	JavaScript / Client Script	Incident form validation	High
4	Prevent state change via list edit	JavaScript / Client Script	Incident list view	Medium
5	UI Policy Action – Urgency	ServiceNow UI Policy Action	High Impact Incident behavior	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	UI Policies and Client Scripts are organized by specific Incident requirements and triggers.
Readability	5	Names, conditions, field references and user messages clearly describe the intended behavior.
Reusability	5	Separate Client Scripts and UI Policy components can be applied to similar Incident validation and control.
Documentation / Comments	4	Project documentation clearly explains configuration steps, verification and expected results.
Overall Score	5	The implementation is structured, readable and reusable for the stated Incident-management project.

Project basis: The source project describes a ServiceNow Incident implementation using UI Policies plus onChange, onSubmit and onCellEdit Client Scripts to control fields such as Impact, Urgency, Assigned To and State. ■filecite■turn0file0■L107-L125■

The original template evaluates consistent indentation, file structure, meaningful names, function names, comments, modular design, redundant code and error handling. ■filecite■turn0file1■L11-L21■
