

Coding & Solution

Date: 29 September 2026

Team ID: SWTID-2026-8065

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented ServiceNow configuration and the overall solution. The submission demonstrates working functionality, clean code practices, and alignment with the defined Incident-management requirements.

Instructions:

1. Ensure the Client Scripts are well-structured, clearly named, and follow ServiceNow best practices.
2. The solution should address the core problem statement and implement the key functional requirements for Incident records.
3. Include the required UI Policy, UI Policy Action, Client Scripts, validation logic, and testing/configuration details.
4. Attach or link to the code repository if one is used for the project.

Solution Summary

Field	Details
Repository Link / URL	Not provided in the project documentation
Programming Language(s)	JavaScript (ServiceNow Client Scripts)
Framework(s) Used	ServiceNow Platform / UI Policies / Client Scripts
Key Features Implemented	High Impact Control UI Policy; Urgency read-only control; automatic Urgency update for High Impact; Assigned To
Pending / Incomplete Features	No pending features are specified in the project documentation
Setup / Run Instructions	Configure the UI Policy and UI Policy Action on Incident; create the onChange, onSubmit and onCellEdit Client S

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into separate Client Scripts / UI Policy components	Yes
2	Meaningful variable, function, field and script names are used	Yes
3	Code includes clear naming, messages and documentation where necessary	Yes
4	Error handling / validation is implemented for critical operations	Yes
5	The ServiceNow solution is configured to perform the required Incident behaviors	Yes
6	Code / configuration is committed to a version control repository	Not specified

Additional Notes / Comments:

The solution is based on the documented Incident project requirements. It uses a UI Policy named "High Impact Control" and Client Scripts for onChange, onSubmit and onCellEdit behavior. The documented testing verifies mandatory enforcement, successful save, reverse-condition behavior, list-edit blocking and other configured behaviors.
